

SUPPORTING DELIVERY OF A £15M PROJECT TO REPLACE PIPES UNDER THE SOLENT

Aquatic has enabled Dutch specialist cable and pipeline installation contractor, Visser and Smit Hanab, to support the delivery of a £15m project.

THE PROJECT

Aquatic was approached to assist and enable Visser and Smit Hanab for the client, Southern Water, to replace pipes under the Solent, delivering drinking water to the Isle of Wight.

SCOPE

Two type 9.8m reels, an AQPRO2 drive system, an AQPRTS track system and a two tracked tensioner unit, were seafastened to the deck of a dumb barge at our marine facility in Peterhead for transit to Denmark.

THE RESULT

The new pipes were trans-spooled onto the reels and the barge, complete with installation spread, this was then towed to the Solent for the product installation phase.

RENEWABLE ENERGY EXPERTISE

Aquatic has provided services for several offshore wind farms including:

- Trianal Borkum West II
- Thanet Offshore
- Egmond Aan Zee
- Ormonde Offshore.

Aquatic has provided services for a number of submarine power cables projects including:

- Valemon Diving
- TAQA Otter
- EWIP Offshore
- Demar.

Aquatic's expertise in the offshore wind farm and submarine power cable installation markets is based on a solid foundation and proven track record.
