

FRYING PAN TOWER - OFFSHORE BED & BREAKFAST ON A FORMER LIGHTHOUSE PLATFORM

Frying Pan Tower - Deepwater provides RetroLink™ anode strings for a weekend retreat that was originally a lighthouse.

THE PROJECT

The Frying Pan Tower was constructed in the early 1960s as a Coastguard lighthouse based on a modified Texas drilling platform.

The tower sits at the end of the Frying Pan Shoals off the coast of North Carolina, where it served as a lighthouse until 2003.

In 2010 the tower was purchased by a civilian and has been undergoing constant repair and restoration ever since.

This weekend retreat has seven bedrooms for paying guests.

Deepwater donated six RetroLink™ anode strings in 2012.
