

The Specialist Offshore Services high flow fluid injection unit is based on a proven Dynaset pump. This particular model boasts 150 LPM, which is the rate which some BOP safety shut in systems require.

Use this unit to pump a large body up to a certain level and then top it up with a higher pressure unit with lower flow to achieve the final level.

Can be used in conjunction with other fluid injection units to achieve higher pressures.

Features

- ⇒ Hydraulic Input max 210Bar, 85 LPM
- ⇒ Output 0-90Bar, Flow 150 LPM
- ⇒ All required hydraulic valves included
- ⇒ Flow adjustable from 30-80 LPM
- ⇒ Operational hoses supplied
- ⇒ 1.5"ID suction hose, JIC 16 Output fitting
- ⇒ Can be used to pump other fluids, such as hydraulic oil, Glycol, Methanol
- ⇒ Measures 430mm x 230mm x 320mm
- ⇒ Weight 28kg in air
